

## THE T-PROFILE - A SHORT HOW-TO GUIDE

Looking outside of one's own (academic) box is part of the Design-Thinking education: Since innovative solutions to complex problems require several disciplines, it is beneficial for problem solvers to speak different "languages" to ease understanding and allow for varying points of view. In order for us to attain better insight not only into your professional experience and academic knowledge, but also your interfacing expertise,

interdisciplinary skills and projects, we ask you to please complete the T-Profile on the next page. There is only one rule: The vertical bar must be filled with relevant information about your academic studies. In the horizontal bar, you can map competencies and activities that transcend or do not relate directly to your field of study. How and in what format you do this - as a text, drawing, diagram or photograph - is completely up to you. What counts is that the most important facts about you must fit on one page. So go ahead and show us your own personal T-Profile!
